Erasmus+

## Automobiles

BLG Logistics manages the transport and adjusts cars.

They provide car parts for companies, check for any damage and make sure the car parts get to the dealerships. They also do the finishing touches on cars to the customer's preference.

BLG can take care of the transport and storage of the cars from the beginning till the end. The cars are placed in very big storage places where some are ready to go to the customer and others need technical services.

## Containers

The company manages the transport of containers and objects they call "High and Heavy" that can't be shipped in containers for example tractors or big pipes. The content of a container doesn't matter to the BLG: the only things they need to know are its weight or if it's hazardous. This information is important for appropriate and safe storage.

The BLG can transport by train, lorry, airplane or boat. The costs vary depending on the shipping method. Usually transports goes by boat since its the most price efficient option. For example, when one container is moved from Asia to Europe the cost is around 500 Euros only.

## Contract

This is the heart of the company. They organise every process so everything is at its place at the right time. The products that are taken care of by BLG Logistics can vary from cookies to furniture to clothing, but the most common are cars. They have many big companies they provide their service to, like Ikea, Bosch and Red Bull.
